Research in machine learning and Internet measurements
4 international internships in France, Austria, and the United States
15 publications

Research statement

My research lies at the intersection of machine learning and computer networks, and I develop systems which significantly enhance the experience of Internet users. Today, we perform more and more daily tasks and entertaining activities through the Internet and it is thus crucial that we can do so without being hindered by poor performance. My ultimate goal is to conceive systems based on machine learning which make the Internet smarter and able to face demanding users and an ever-growing amount of heterogeneous network traffic.

Education

PhD Computer Science   **Inria Paris / Université Pierre et Marie Curie – France**

- Thesis subject: **Monitoring and diagnosis of Internet Quality of Experience (QoE)**
- Supervised by Dr. Pedro Casas (AIT Austria)
- In the context of my PhD, my goal will be to deliver algorithms, methods, and software systems to measure Internet QoE and diagnose the root cause of QoE impairments. Currently, I am working on two research projects.
- For the first one, **I am developing techniques to infer video QoE metrics with a novel lightweight system** that analyses traffic generated by DASH on-demand and live video streams while running at the home network gateway of the users. This project is carried out in collaboration with Princeton University.

  For the second one, **I am conceiving active-learning techniques based on reinforcement learning principles** to gather the users' feedback about their experience in a more effective way. Asking the users too often for feedback is annoying and discourages them from answering accurately. This project is carried out in collaboration with Boston University and Inria Sophia Antipolis.

  For the third project, **I am analysing the impact of user interactions when watching YouTube videos** (for instance, the effect on the network when the user is seeking, changing the quality, the speed). Additionally, I aim at predicting user interactions (when they occur and what type of interaction it is) using machine-learning models relying on network-related features. This project is carried out in collaboration with AIT Austria.
- Expected graduation in **October 2020**

MSc. Computer Science   **Université de Liège (ULiège) – Belgium**

- Specialised in **computer systems and networks** with additional electives in **machine learning and computer vision**
- Master's thesis entitled **"Anycast-based DNS in Mobile Networks"**, supervised by Prof. Fabián Bustamante (Northwestern University) and Prof. Benoit Donnet (University of Liège); with **high honours**
  http://orbi.ulg.ac.be/handle/2268/215008
- **Conducted research** under the supervision of Dr. Pedro Casas, Prof. Fabián Bustamante, and Prof. Benoit Donnet in the field of **Internet measurements**. **Topics:** Internet path dynamics and performance, machine learning for networking, anycast in cellular networks, malware detection in smartphones
- Active as a student representative during my whole Master's studies
- Graduated with **honours** in **September 2017**

BSc. Computer Science   **Université de Liège (ULiège) – Belgium**

- Ranked among **Top 3 students** every year: 2 out of 50 1st year, 1 out of 10 2nd year, and 3 out of 9 3rd year
- Active as a student representative during the last two years of my Bachelor's degree
- Graduated with **honours** in **June 2015**

General Certificate of Secondary Education   **Lycée Michel Rodange – Luxembourg**

- Main subject areas: mathematics and informatics
- Graduated with grade **excellent** in **July 2012**

Online courses   **Coursera**

- Deep Learning Specialisation (overall score: **100%**); **March 2018**
  - This specialisation includes 5 courses: Neural Networks and Deep Learning; Improving Deep Neural Networks: Hyperparameter tuning, Regularization and Optimization; Structuring Machine Learning Projects; Convolutional Neural Networks; Sequence Models
- Image and video processing: From Mars to Hollywood with a stop at the hospital (score: **100%**); **March 2014**
- Machine Learning (score: **100%**); **September 2014**
- An Introduction to Interactive Programming in Python (score: **99.6%**); **January 2014**
- Einführung in Computer Vision (score: **65.5%**); **February 2014**

Awards and honours

- **Inria PhD fellowship** allowing me to carry out a PhD at Inria Paris (**ranked 1st among all applicants by the admission committee**); October 2017
- **Travel grants** to attend ACM CoNEXT 2015, TMA PhD School 2016, IEEE LCN 2016, ACM CoNEXT 2016, ACM SIGCOMM 2017 (N2Women fellowship and SIGCOMM travel grant), TMA PhD School 2018, ACM SIGCOMM 2018 (Netflix Diversity travel grant)
- **Pisart Grant** for pedagogical support; fall 2014
- **Best student prize** for graduating as the best high-school student of my class (grade: **excellent**, ranked in **Top 1.3% of the Grand Duchy of Luxembourg**); July 2012
- **Best student prize** for having the highest GPA of my class in all the academic years from 2005 to 2009

Research experience

Junior investigator   **Austrian Institute of Technology (AIT) – Austria**

- Research internship in the context of the ICT15-129 project Big-DAMA under the supervision of Dr. Pedro Casas; **March 2017**

- The subject of this research stay was "***Mobile Malware Detection using Machine Learning and Big-Data Analytics***". I worked in the **analysis of a large-scale dataset of smartphone measurements**, with the aim of automatically discovering malware activity. I developed different machine-learning based approaches for both **supervised and unsupervised detection of malware applications**, using the scikit-learn machine-learning library. Our first results are presented in [W3, P2].

Visiting pre-doctoral fellow   **Northwestern University (NU) – United States**

- Research stay in the Aqualab group under the supervision of Prof. Fabián Bustamante and Dr. John Rula; **July – September 2016**

- My research topic was entitled "***Analysis of Anycast-based Content Distribution in Cellular Networks"***. I studied the **performance of anycast routing for cellular clients**. I conducted and analysed the **measurements from distributed mobile vantage points to a live anycast service-**, measuring the latencies and routes to server deployments, and investigated the causes of poor performance for cellular clients. This internship lead to my Master's thesis, and we discuss the outcome of our study in [C2, P1].

Research intern   **Forschungszentrum Telekommunikation Wien (FTW) – Austria**

- Research internship in the context of the of the FP7 ICT European Research Project mPlane under the supervision of Dr. Pedro Casas; **July – September 2015**

- The subject of this internship was "***Tracking the Performance of CDN Servers-to-Customers Internet Paths with Distributed Active Measurements***". I worked in the field of **geo- and topology-based location of active probes** – devices capable of launching active measurements – **at the Internet scale**, relying on the well-known **RIPE Atlas** distributed active measurements platform. I designed and developed **DisNETPerf**, an Internet-scale measurement framework to track the performance of Internet paths, relying on distributed probes' location and active measurements. In a nutshell, DisNETPerf can measure path performance using standard traceroute-like measurements, but can do so for paths connecting arbitrarily selected nodes. I developed different techniques to find the optimal probe – in terms of network topology and path latency – closest to a desired server, which is then used to masquerade this server and to collect active network-path measurements. DisNETPerf thus allows users to accurately monitor servers through active measurements, even if they do not have access to these servers. An in-depth description and evaluation of my tool can be found in [W1, A1, D1].

Summer intern   **Laboratoire d'Informatique de Paris 6 (LIP6) – France**

- Internship at the Laboratory of Information, Networking and Communication Sciences (LINCS) under the supervision of Prof. Timur Friedman, Dr. Marc-Olivier Buob, and Dr. Jordan Augé; **July 2014**

- I was involved in the **Paris Traceroute** and **libparistraceroute** projects. I developed **Paris Ping**, a generic ping tool based on the libparistraceroute library which can handle IPv4, IPv6, and TCP, UDP, ICMP probes. Contrary to the standard ping tool, the flow IDs of each sent packet remain constant in order to avoid flow-based load balancing, which enhances the accuracy of the latency measurements. In addition to the implementation of Paris Ping, I also extended the libparistraceroute library.

Editorial boards

Reviewer   **IEEE Communication Letters**

I served as a reviewer for IEEE Communications Letters in **September 2016**

Open-source projects

DisNETPerf

I designed and implemented DisNETPerf – a Distributed Internet Paths Performance Analyzer – during my internship at FTW, with the collaboration of Dr. Pedro Casas and Dr. Pierdomenico Fiadino.

DisNETPerf is a tool that allows one to **locate the closest RIPE Atlas box** (in terms of minimum RTT) to a given IP address. Once the closest RIPE Atlas box has been located, DisNETPerf permits to **launch traceroutes** from this box to a destination IP address provided by the user. More details about the tool and how the closest probe is actually chosen are explained in [W1, A1, D1, D2].

DisNETPerf is freely available on GitHub: https://github.com/SAWassermann/DisNETPerf

NETPerfTrace

I developed NETPerfTrace — an Internet Path Tracking System — while working on a research project about the prediction of Internet path dynamics and performance, in collaboration with Dr. Pedro Casas.

NETPerfTrace is a tool capable of **forecasting path changes and path latency variations**. NETPerfTrace aims at predicting **three metrics**:
- the residual life time of a route (i.e. the remaining life time of the route before it actually changes)
- the number of route changes in the next time window
- the average RTT of the next traceroute sample

The overall idea of this tool and preliminary results are presented in [W2, A2, D2, R1].

NETPerfTrace is freely available on GitHub: https://github.com/SAWassermann/NETPerfTrace

libparistraceroute

I contributed to the libparistraceroute project (which includes the well-known Paris Traceroute) during my internship at LIP6.

My main contribution was the development of **Paris Ping**. I also extended the libparistraceroute library itself by adding probe matching. More precisely, I implemented functions to check whether a probe corresponds to the reply to a given probe (for the IPv4/6, ICMPv4/6, and TCP protocols).

libparistraceroute is freely available on GitHub: https://github.com/libparistraceroute/libparistraceroute

Teaching activities

Undergraduate teaching assistant   **Université de Liège (ULiège) – Belgium**

I was hired as an undergraduate teaching assistant to supervise and help students during the exercise sessions for the course **Introduction to Computer Programming** (1st year BSc. course in Computer Science, taught by Prof. Benoit Donnet); **fall 2013 and 2014**

Work experience

Active member   **IEEE Student Branch Liège**

I designed flyers and posters for the events organised by the student branch. I also actively participated in the organisation of conferences. I have been the main organiser for the talk entitled "*Practical Internet-of-Things: the reality between people, process, data and things*" given by Emmanuel Tychon (Cisco) at the University of Liège in November 2016. I participated in IEEEXtreme 8.0 as a competitor; **2013 – 2017**

IT coordinator   **Board of European Students of Technology (BEST)**

I was responsible for redesigning and reworking the website of the local BEST group of the University of Liège; **2013 – 2015**

Event organiser   **Board of European Students of Technology (BEST)**

I was in charge of organising events in collaboration with the IEEE student branch at the University of Liège. I helped organising the conference about photonic quantum computers given by Dr. André Hautot in February 2014; **2013 – 2015**

Technical skills

Programming languages	Python, Java, C, C++
Data analytics	scikit-learn, Weka, Hive
Query languages	SQL
Web publishing	HTML, CSS
Software development kits	Android SDK (Java)
Operating systems	Microsoft Windows, Linux
Development environments	Microsoft Visual Studio (Ultimate), PyCharm, IntelliJ IDEA, MathWorks MATLAB
Other software	Adobe Photoshop, Maxon Cinema 4D

Languages

Luxembourgish	native proficiency
French	bilingual proficiency
English	full professional proficiency
German	full professional proficiency

Personality and interests

Personality

hard worker, results-driven, detail-minded, creative

Interests

Travelling, reading (mostly novels), photography, listening to music (particularly electronica), playing the piano, graphic design, video games (especially action-adventure and strategy games)
